

THE

SQUARE

GOLF BALL®

February 28, 2014

### Unparalleled Uniqueness

The Square Golf Ball® is truly without a rival. The concept itself draws interest from golfers and non-golfers alike. After all, virtually everybody on the planet knows what a golf ball looks like. In order to not be a toy, the production needed to be as realistic as possible. If The Square Golf Ball® looked like a toy, it would become a toy – which was never the purpose. The Square Golf Ball® manufacturing process uses the exact same outer skin covering as is used in most traditional golf balls – poly urethane. The Square Golf Ball® has the same dimples and feel as a traditional golf ball. And The Square Golf Ball® is the same weight as a traditional golf ball. The size is actually the same as well, although due to the unique shape, The Square Golf Ball® initially appears larger than a traditional golf ball. The diameter of a traditional golf ball and The Square Golf Ball® is identical. That means, if you took a sleeve of three traditional golf balls, removed the golf balls, you could then slide three Square Golf Balls into the package with a perfect fit. While The Square Golf Ball® exhibits all the characteristics of a traditional golf ball, The Square Golf Ball® is NOT to be stuck or hit, nor used in golf or any other sporting challenge. Hitting The Square Golf Ball® will result in complete destruction of The Square Golf Ball®, and may also damage the instrument used to hit The Square Golf Ball®.
