

THE

SQUARE

GOLF BALL®

February 7, 2014

## Where In The World Did This Idea Come From, Part II?

By July 2012 I had filed two patent applications for The Square Golf Ball®. Little did I realize how lengthy a process this patent process would take. But it also gave me time to refine my searches for the people who could assist me. I really wanted to make The Square Golf Ball® in the USA, but to be fair, I needed to research overseas manufacturing options. The results of my efforts showed that I could manufacture overseas for half the expense of the USA. But much of the savings would be consumed in freight and customs fees. Plus my ability to physically check-in at the production location would be quite pricey. Luckily, I located a professional manufacturer in the USA who was able to produce The Square Golf Ball® at a price that remained within my budget. By August 2013 I had submitted my third patent application, and technical drawings were in process. By November 2013 a final version had been created and test produced. Minor flaws were discovered, and another round of tweaking was required. But in the end, The Square Golf Ball® came into the world, ready for all to see. Little does anyone know that it took 20 years to get to this point!
