### Is The Square Golf Ball A Choking Hazard?

The Square Golf Ball® is not classified as a choking hazard according to US size guidelines. Interestingly, a traditional golf ball IS considered a choking hazard. Instead of getting too technical, if you use a standard toilet paper cardboard tube, any item able to pass through that tube is considered a choking hazard. While you may be able to actually get The Square Golf Ball® into your mouth (we strongly advise not trying this), odds are that you in no way can swallow or choke on The Square Golf Ball®. Nor can you chew off a corner – but again, why would you even try? We’re bordering on the absurd at this point, however we did want to make the distinction that The Square Golf Ball® is not considered a choking hazard by US standards for measuring these things. The Square Golf Ball® was initially conceived in 1995 while discussing golf. A poor day of putting spurred a comment by the now inventor about how a square golf ball wouldn’t roll past the cup. After some laughs, the inventor sketched a rough design and even put the name “The Square Golf Ball®” on the sketch. The idea was filed away with no real pursuit. When the internet found its way into the scene, searching for all types of things became easier and easier. The inventor searched for this square golf ball item believing it must have been thought of before now. Searches went on, and finally in early 2012, after extensive and exhaustive searching, the original concept and name from 1995 came to life and the rest as they say, is history.
