

THE

SQUARE

GOLF BALL®

May 30, 2014

What Is The Lifespan Of The Square Golf Ball®?

The Square Golf Ball® should last a virtual lifetime when used as intended. The poly urethane resin cover is exactly what traditional golf balls are made of. Anyone who has been in the weeds searching for their ball has come across ancient finds – golf balls that seem to have been stuck in the muck for years on end. When washed off, the material is usually still intact. And that's a worst-case scenario. We seriously doubt, and do not recommend taking The Square Golf Ball® outside and planting in the dirt! Using common sense, The Square Golf Ball® will last forever. Don't hit The Square Golf Ball®. Don't subject The Square Golf Ball® to ultra-high heat (like on a car dashboard in Phoenix in July). Don't put chemicals on The Square Golf Ball® (if it needs washing, plain water should do the trick). Outside of purposefully trying to damage The Square Golf Ball®, we don't see any reason why this item won't last forever. Perhaps 1,000 years from now people or beings will unearth The Square Golf Ball® and wonder exactly what its purpose was. Maybe it will be associated with people in a special class? A little far-fetched at the moment, but without prior knowledge of The Square Golf Ball®, it is possible a theory could be developed and believed. After all, the earth was flat for a long time. So feel free to add The Square Golf Ball® to your own time capsule, and give people something to scratch their heads about 300+ years from now.
